# PRACTICE ASSESSMENT 1

Task: Create the following design with HTML and CSS.

Build Specifications:
- Do not worry about trying to match the exact spacing of the elements in the form.
- The red and black portions fill up 100% of the viewport height regardless of screen size.
- The red portion takes up ⅓ of the page horizontally while the black portion takes up ⅔ of the page horizontally. Use flex properties to achieve that functionality
- Must include a form that contains an h2, two labels, two inputs, and a button.
- The labels must be properly associated with their corresponding inputs for good accessibility.
- The form is styled with a width and height of 220px and 40px of padding.
- The form is centered on the red portion of the page using flex.
- The form has 10px rounded corners.
- The inputs and button have 5px rounded corners and 5px padding.
- The bullseye is constructed with 3 divs
  - Outer div has a width and height of 300px and a background color of red
  - Middle div has a width and height of 200px and a background color of white
  - Inner div has a width and height of 100px and a background color of red
- The bullseye is centered on the black portion of the page using absolute positioning.
